

Q1. What will the following code snippet print?

```
x = 10
if x < 5:
    print("x is less than 5")
elif x > 15:
    print("x is greater than 15")
else:
    print("x is between 5 and 15")
```

a) x is less than 5 b) x is greater than 15 c) x is between 5 and 15 d) No output

Q2. How can you execute multiple statements under a single if block in Python?

- a) Separate statements with a semicolon
- b) Indent the statements to the same level
- c) Use the and keyword between statements
- d) Use the elif keyword

Q3. What will be the output of the following code snippet?

```
x = 5
if x < 3:
    print("x is less than 3")
elif x == 3:
    print("x is equal to 3")
else:
    print("x is greater than 3")
```

- a) x is less than 3
- b) x is equal to 3
- c) x is greater than 3

d) No output

Q4. What is the primary purpose of the if statement in Python?

a) To execute a block of code based on a condition

b) To perform mathematical operations

c) To repeat a block of code

d) To define a function

Q5. What is the purpose of the pass statement in Python?

A. To terminate a loop.

B. To skip the current iteration and move to the next.

C. To act as a null operation or placeholder where code is syntactically required.

D. To return a value from a function.

Q6. What is the purpose of the if statement in Python?

a.) To define a function

b.) To declare a variable

c.) To execute a block of code conditionally

d.) To create a loop

Question 7

Which of the following operators is used for equality comparison in Python?

a) ==

b) =

c) ===

d) >

Question 8

What will be the output of the following code snippet?

```
x = 5
if x > 0:
    print("Positive")
```

```
else:  
    print("Negative")
```

A

A Positive

B

B Negative

C

C Zero

D

D Error

Question 9

How do you represent the logical AND operator in Python?

A

A &&

B

B and

C

C AND

D

D &

Question 10

What is the purpose of the elif statement in Python?

A

A To handle exceptions

B

B To create a loop

C

C To define a function

D

D To check additional conditions after the initial if statement

Question 11

In Python, what is the purpose of the else statement within an if-else block?

A

A To define a function

B

B To check additional conditions

C

C To execute a block of code when the if condition is false

D

D To create a loop

Question 12

What is the output of the following code snippet?

```
x = 10  
if x > 5:  
    print("Greater than 5")  
elif x > 8:  
    print("Greater than 8")  
else:  
    print("Less than or equal to 5")
```

A

A Greater than 5

B

B Greater than 8

C

C Less than or equal to 5

D

D No output

Question 13

Which statement is used to exit a loop prematurely in Python?

A

A break

B

B exit

C

C return

D

D continue

Question 14

In Python, what is the purpose of the try-except block?

A

A) To create a loop

B

B) To check multiple conditions

C

C) To handle exceptions

D

D) To define a function

Question 15

What is the output of the following code snippet?

```
for i in range(5):
```

```
    if i == 3:
```

```
        continue
```

```
print(i)
```

A) 0 1 2 3 4

B) 0124

C) 0 1 20

D) 0123

Q16. What will be the output?

```
for i in range(3):
```

```
    pass
```

```
print("Hello")
```

A) Error

B) 0 1 2

C) Hello

D) Nothing

Q17. Which statement is used when a block of code is required syntactically but you do not want any action?

A) break

B) continue

C) skip

D) pass

Q18 What will happen?

```
if True:  
    pass  
print("Python")
```

- A) Error
- B) Python
- C) Nothing
- D) True

Q19 Which of the following is TRUE about `pass`?

- A) It ignores errors
- B) It terminates the loop
- C) It performs no operation
- D) It skips the next line

20. Fill in the blank:

The `pass` statement is a _____ statement.

- A) looping
- B) null
- C) conditional
- D) function
